## Stand-up and transfer aid *VITA-Lift*<sup>®</sup>

HMV: 22.29.01.1006

This stand-up, walking, transport and transfer aid, suitable for domestic use, as well as in the nursing home and healthcare sectors, affords both stimulation and mobilisation. A patient can be lifted very carefully – in accordance with physiological movement patterns – from a seated to a standing position and be moved directly to the bath, toilet or bed, all without effort. In this way, the patient's leg musculature, sense of balance and circulation, among other things, is trained. Due to its compact design, the Vita-Lift is ideal for use in very confined spaces.

The electrical straddle adjustment allows a wheelchair to be pushed directly up to the footplate.

The belt and knee supports are padded for comfortable transport of the patient. Lifting arm and knee supports are individually adjustable.

Also available is the option of two swivel-mounted hand grips for additional safety during the raising of the patient.

For patients who are mobile with guidance and support and only require backup protection while standing, the footplate of the Vita-Lift can be folded up out of the way.

A cable-operated remote control allows the patient to operate the stand-up aid for herself or himself, thus granting the patient the greatest possible independence and privacy.

Patients with little remaining mobility can also be raised with the Vita-Lift. For this, the attachment of an optionally available cross-plate and cross-plate belt is recommended.

**Accessories:**

- Elevated foot plate
- Hand grip
- Calf belt and calf belt mounting
- Extensive sling program for patient lifter and stand-up aids.

Patient lifter

# *Hospi-Lift*<sup>®</sup>

HMV: 22.40.01.0083

A high quality product with an attractive design.

This practical lifter is equipped with electrical parallel leg spreading, which enables easy and comfortable lifting of the patient out of a wheelchair or bathtub for example. A problem-free lifting of the patient from the floor is possible as well.

With the base of the lifter being a standard height of 10,5 cm and standard size 7,5 cm double castors it is able to access under most nursing beds.

**Do you need a lifter with even lower under-bed clearance? Give us a call! Perhaps we already have a solution.**

All four wheels are each equipped with a full brake.

The high-quality drive technology allows smooth and painfree raising and lowering of the patient.

All functions are operated by a remote control handset.

**Accessories:**

- Carry bar 4-point
- Carry bar 3 sizes
- Wide range of slings

Other models:

*Hospi-Lift mini*

*Hospi-Lift xl*

## Walking Belts & Vests

Walking belts and vests are helpful for patients who suffer from weakness in the legs and require support while walking, and also offer protection from injury. They can be used as rehabilitation aids and also for support in activities such as using the toilet.

Depending on the design or model, they can be used with a ceiling lift or suitable walking aid.

We also offer belts that can be used as a support during assisted walking.

## Belts for Stand-up aids

Safety and support during the assisted raising of patients who are able to weight bear on their legs.

Belts for raising aids can be selected individually from our range in accordance with the model of the stand-up aid, indications of the patient and the support they require.

Our belts are robust and adjustable to the body size of the patient.

Many models are equipped with anti-slip areas and padding in the arm area.

## Lift & transfer slings

The standard design of our lift and transfer slings is very versatile due to its universal cut and therefore ideally suited to healthcare institutions and facilities.

The half-height back allows the patient free movement of the arms. According to requirements, they can be positioned inside or outside the sling.

The separate leg loops allow for the patient to be easily positioned into the sling.

Several loops on the suspension allow for the best and most comfortable sitting position.

## ... with Headrest

A good feeling of security is granted to the patient when the lift or transfer sling is correctly and well fitted.

Our sling with a high back is particularly well suited to patients with low core stability and reduced head control. The cup shape affords secure support.

A heightened sense of security is offered by the reclined seating position and head support.

Raising of the patient from a recumbent position is possible.

## Deluxe Slings

Individual sizes, shapes and equipment features allow for an optimal selection in accordance with the requirements and indications of the patient.

The raising of the patient from a sitting position, e.g. out of a wheelchair, is made possible by the special shape of the deluxe sling. Several suspension loops provide the necessary security.

The deluxe slings are available with different back heights.

## ... for leg amputees

The special cut with padded leg support of the slings for leg amputees allows a comfortable and correct position with good support in the torso and buttock area.

The additional provision of a fastenable double chest strap offers additional security. Some models provide the patient with a greater sense of security via additional loops on the legs.

## Bathing & Showering

Our lifter slings for wet areas are made from rigid polyester mesh. Their applications include showers, baths and swimming pools. They are made of skin-friendly materials and dry easily. Our neoprene belts are most suitable as rehabilitation aids in the swimming pool.

## Hygiene & Changing

Secure transfer to the toilet is guaranteed. The patient is lifted toward the knee-bend and chest area, so that the intimate area is left free. Easy changing is possible, the leg loops can be loosened individually. The waist strap with double buckle ensures sufficient body stability in the 90° sitting position. It offers more safety, an increased sense of security and a uniform distribution of pressure.

## Recumbent Transfer

Our slings for moving recumbent patients guarantee a transfer in the recumbent position during which the patient is kept stable. The patient is optimally supported in the back area by bracing that is integrated into the sling. For orthopaedic indications, divided leg sections with individual height adjustment can be chosen. Depending on the model, slings with bottom opening and/or for wet areas, made from rigid mesh material, are available.

## Paediatric Belts & Slings

ATO FORM offers a wide range of belts and slings for children. The slings are characterised by bright colours and shapes.

No pinching or catching, the slings and belts are softly padded and ensure a uniform distribution of pressure.

The shape of the slings follows the shape of the back, so that a correct and comfortable position is ensured.

## Belt finder

Use our "Belt Finder" to locate the appropriate belt or sling for your individual needs.

Various search filters provide an optimally targeted search.

## Custom made

## Toilet seat lift *Liftolet*<sup>®</sup>

A great help for people who find it difficult to sit down and stand up. Liftolet fits onto most standard toilets without disadvantage for other users.

The WC seat lift can be subsequently installed. If no floor attachment is desired or the Liftolet is intended for non-stationary use, the WC seat lift can be equipped with an optional baseplate. Rustproof materials (aluminium profile, Nirosta stainless steel) are used for the baseplate and lifting columns.

The lifting height is 40 cm higher from the normal seat height.

Liftolet with  
Pressalit<sup>®</sup>  
support arms

The Liftoilet can be supplied with different support handles, appropriate to the needs of each individual case. All support handles can be folded up out of the way and contain the interface for operating assisted standing and sitting.

- **Custom-built XXL models also possible**
- **Normal sitting height**
- **No disadvantage for other users**
- **Fits all toilet bowls (hanging or standing)**
- **Also suitable for subsequent installation**

**Accessories:**

- Button for flush or emergency call is mountable in both support handles
- Base plate for mobile use and even places with floor fixing problems
- Support arms Pressalit®
- Toilet paper holder for support arms Pressalit®
- Further special accessories available on request

You have in your hands the “stand-up aids, patient lifters and accessories” range, which is part of the wide variety of products available from ATO FORM.

Each product shows clearly with what dedication, indispensable experience and great craftsmanship it has been manufactured – all in order to promote and support the best possible patient care and treatment.

Dialogue with you is the basis of meaningful innovation for us. For specialised problems, please call us, perhaps we already have the desired solutions.

You can find continuously updated information on our range of products on our homepage: [www.ato-form.com](http://www.ato-form.com).

We would like to point out, that we reserve the right to make alterations if required due to technical reasons. Possible alterations made apply also to colour and fabrics. The products displayed are either the basic models or a variation thereof (e. g. with accessories). Please, take this into consideration when ordering. We do not accept liability for printing errors.
